

TRANSPORT ENGINEERING

Engineering solutions can mitigate increasingly complex infrastructure problems, allowing you to reduce or even eliminate risk.

Super Freight's in-house team of transport engineers has a proven and successful track record in designing,

systemizing and supervising heavy transport.

The team provides the following services:

- Conducts feasibility studies, route surveys, marine surveys and infrastructural evaluations.
- Develops methodology and procedures for transport of heavy and over dimensional cargo.
- Conducts and maintains continuous risk assessment schedule.
- Designs and builds specific customized transport frames and provides certified drawings and calculations.
- Evaluates the technical suitability of handling and transport equipment.
- Evaluates and supervises handling, shifting and securing methods and systems.
- Operates under strictest guidelines for health, safety and environment
- Can be mobilized to any project site at short notice.
- Provides complete sub-contractor management.
